- 2023 At-A-Glance
- The Future of Z³

BUILDING TOMORROW'S DEFI, TODAY.

PROBLEM STATEMENT

Since December 2020, the crypto ecosystem has experienced a burgeoning challenge of security and integrity. Over 200,000 scam tokens, translating to an alarming rate of 288 per day, have been deployed. These deceptive practices are dominated by honeypots, hidden mints, and fake ownership renunciations, which account for a staggering 94.8% of the associated exploits.

The impact on the investor community is profound and concerning; nearly two million investors have fallen victim to rug pulls, which have drained more financial resources than the combined bankruptcies of notable entities such as FTX, Celsius, and Voyager. Additionally, malicious developers have cunningly deposited and then withdrawn a whopping \$11 billion of ETH from Centralized Exchanges (CEXs).

Central to these concerns is the vulnerability of exploited smart contracts, which serve as a recurrent theme in these rugpulls. The pressing need to address this pervasive issue has hit a boiling point, as has the desire for tools and systems that ensure the safety and reliability of blockchain technology for its global users.

TIME FOR A CHANGE

The Z³ platform emerges as a beacon of hope in these turbulent times, illuminating a path toward a more resilient and robust DeFi landscape. Z³, or Z-Cubed, is not just another project development platform. It embodies a best-in-class, comprehensive solution with an unwavering commitment to revolutionizing DeFi security. Guided by a singular, crystal-clear goal, Z-Cubed aims to break down the barriers that plague project development and chart a safer trajectory for DeFi. Its mantra is simple: restore trust in decentralized finance, one secure contract at a time.

But what truly sets Z³ apart is its innovative approach. With its state-of-the-art contract creation and launch suite, developers are no longer left grappling with convoluted processes or ambiguous security protocols. Instead, launching a safe, secure project becomes as intuitive and straightforward as 1, 2, ³.

Z³'s mission transcends mere contract creation. Recognizing the multifaceted challenges the crypto community faces, Z-Cubed is dedicated to overhauling the entire DeFi arena. While it began with a foundation in robust contract creation and launch security, Z³'s vision is expansive. By championing both accessibility and transparency, Z³ equips developers and investors with the tools and insights needed to confidently navigate the DeFi space. To that end, Z-Cubed aims to refine and innovate the tools and resources presently available, transforming the way users research and engage with tokens. As we approach a new era in DeFi, Z³ stands at the forefront, embodying change and heralding a secure, prosperous future for all participants.

ZEV³

At Z³, our perspective on smart contracts is fundamentally distinct. For us, it's not just about writing code – it's about rewriting the standards. By delving deep and rethinking how to lay the foundation for strong, healthy projects, we've crafted an innovative approach to smart contract design, development, and implementation.

Introducing ZEV³, a paradigm shift in the project launch process. Conceived by leading industry experts, ZEV³ is our answer to the pressing demand for enhanced safety, unparalleled transparency, and smooth accessibility in contract development. This isn't just another project tool – it's an automated launch revolution that encompasses everything from intelligent contract crafting to bespoke tokenomics and liquidity management.

III The Three Pillars

CONTRACT CREATOR

Often described as the spine of ZEV³, the Contract Creator stands out as a marvel in the smart contract landscape. Picture this: Developers can materialize a contract with just a few clicks, harnessing the power of ZEV³'s specially-formulated, adaptive contract system. And the security? Uncompromised from the get-go, since we've instilled safeguards that ensure each contract remains impermeable to ill-intended modifications.

Moreover, with ZEV³'s inherent tax control mechanism, contracts are restricted from imposing exorbitant transaction taxes. With the cap currently set at 8%, projects, especially those with limited funds, find this approach pragmatic – it allows for revenue generation without crossing the line of fairness.

ZEV LAUNCHER

Think of the ZEV Launcher as the catalyst in our ZEV³ platform. This innovative tool grants developers the autonomy to seamlessly usher their projects into the market.

From deciding the launch schedule to ensuring each technical nuance is taken care of, the ZEV Launcher embodies efficiency. By automating tasks like deployment, liquidity addition, tax configuration, and trading initiation, we're not just making launches error-resistant – we're making them impeccable.

III The Three Pillars

ZENTINEL

In the world of ZEV³, early bird doesn't always get the worm, especially if it's a sniper. Zentinel, our proprietary anti-bot and anti-sniper solution, ensures fair play by thwarting snipers from intercepting early ZEV³ contract launches. This ensures that token distribution remains undistorted, without the threat of snipers monopolizing large portions of the token's supply. With ZEV³, we're not just offering tools – we're laying down a blueprint for the future of secure, transparent, and efficient project launches.

THE PROCESS

The ZEV³ platform, accessible via the Z³ website (z-3.io), has been meticulously designed to simplify the crypto token launch process. Boasting a user-friendly interface, the platform is especially tailored for those without extensive coding knowledge.

Initiating a token launch involves a concise 5-step procedure. Within the ZEV³ Contract Creator, users first outline their token's core details, such as its name, symbol, and supply. Next, they set tax allocations for their project, ensuring not to exceed an 8% tax limit. The subsequent phase, the ZEV Launcher, is where users define liquidity, transaction and wallet limits. Notably, a minimum of 80% token allocation to the Liquidity Pool is required, bolstering investor confidence by preventing large token allocations to the project team.

Additionally, the platform offers an Airdrop Allocations feature, facilitating token assignments to specific wallets or for pre-sale events. The final step, Review & Deploy, allows users to schedule their token's launch date, which can be scheduled between 5 minutes from deployment, and any time into the future. With all details verified, a simple click on “Create Contract” sets the project in motion, created with safe code and secured at launch by Zentinel, Z³'s proprietary bot and sniper protection.

By launching their project through ZEV³, users seamlessly transition into the role of DeFi project developers, championing transparency and investor safety.

CHAIN SUPPORT

Zev³, initially launched on the Ethereum blockchain, is embracing a significant evolution by expanding its reach to multiple blockchains. At present, the Z³ team is on the brink of finalizing its integration with Binance Smart Chain (BSC), which stands out as Ethereum's primary competitor in terms of trading volume. Even more compellingly, BSC has triple the active user base of Ethereum and double the daily transactions, presenting a vast opportunity for Zev to extend its user-friendly services to a broader audience.

Following the BSC integration, Z³ has pinpointed several additional EVM-compatible and equivalent chains, including Arbitrum, Polygon, Shibarium, and BASE as key targets for expansion to maximize its reach. BASE, a blockchain launched by Coinbase, is anticipated to be a significant US-centric competitor to BSC, capitalizing on the widespread recognition of the Coinbase brand in the US market.

As with all development undertaken by the Z³ team, the ultimate goal of extending Zev's reach beyond Ethereum is to provide tools and services to all cryptocurrency users for secure project launches and safe investing options.

DEVELOPERS

Launching a token is merely the first step in the long and arduous process of creating a successful project. With so many facets to oversee in a new project and so few tools to effectively manage smart contracts easily, Z³'s team of experts want to make life a bit easier for developers. That's why Z³ is creating a range of tools, including the Developer Dashboard and Project Profiles.

The Developer Dashboard is a comprehensive interface designed to help project owners manage many of the tasks that can seem daunting for neophyte developers. Contract tax level adjustments, wallet and transaction limits, utility tools, Z³rvices resources, and more, all in a visually appealing, easy-to-navigate dashboard.

Project Profiles are a unique way to represent your brand so that investors can find all the relevant information and links for your project in one place. By creating a Project Profile, you'll be creating a digital business card for your project, an identity that will act as a hub for those visiting the ZEV³ platform who want to research secure, safe tokens.

■ The Tesseract³

THE TESSERACT³

At the heart of Z³ lies The Tesseract³ - a dynamic group comprised of Z³ Core Team members and the vibrant community. Collectively known as 'The Keepers,' this group is the lifeblood of our mission to financially empower new projects. To that end, their objective is to extend liquidity support to projects navigating the ZEV³ launch, especially those lacking adequate funds.

Here's how it works: Projects seeking a liquidity boost approach The Keepers, armed with their business strategies and anticipated returns. The Keepers, with their unwavering commitment to Z³'s success, evaluate these proposals meticulously.

But there's a twist. Each project benefitting from Tesseract³'s liquidity support agrees to a minimal transaction tax atop the regular ZEV³ taxes. This tax, in essence, replenishes the Z³ Treasury, fortifying it for future projects, marketing endeavors, and further investments within the Tesseract³.

THE KEEPERS

The Keepers are an ensemble of:

5 Core Z³ Team Members.

10 Dedicated Z³ Community Members handpicked by our team members based on their engagement and unwavering support for the project.

When it comes to decision-making, every Keeper's voice bears equal weight, ensuring unbiased assessments for liquidity support requests.

LIQUIDITY PROVISIONING

Z³ understands that while ZEV³ opens the door for would-be developers to launch safe, secure projects, it only represents one aspect of the challenges in bringing a project to life. Therefore, the Liquidity Provisioning initiative was established in order to turn the Z³ Treasury into more than just a reservoir, but rather a dynamic tool for supporting Keeper-approved projects via Tesseract³. By offering financial support to projects launching from ZEV³ and collecting a temporary transaction tax, Z³ is not only supporting good projects, but also generating valuable revenue to be used in future developments.

Once their project is approved by The Keepers, developers will utilize a specialized ZEV³ route where Z³ Treasury auto-magically furnishes the requisite liquidity. In reciprocation for the liquidity funding, a small 0.25% tax will persist until the Treasury's investment is replenished, as well as a modest profit. While seemingly inconsequential, this tax mechanism ensures a regular inflow into the Z³ Treasury, promising a stable return on investment.

THE KEEPERS

Our ethos emphasizes inclusivity. Hence, whether you're a community enthusiast or a Keeper, you're welcome to spotlight potential projects for Tesseract³'s endorsement. The Keepers pledge thorough due diligence for every proposal, whether that means combing through documents, having candid conversations with project teams, or hosting formal AMA sessions with founders to gauge a project's merit.

TOKENOMICS

At the heart of the Z³ ecosystem is the Z³ token, a testament to the pioneering spirit of blockchain technology. With a capped supply of 21 million tokens, Z³ nods respectfully to Bitcoin, the trailblazer that initiated the blockchain revolution.

Z³ employs an astute revenue model, fueling project growth without burdening users with high transaction costs. Every transaction with Z³ incurs a modest 4% tax, intelligently distributed to nurture various project facets:

Z³ Treasury: Receiving 2% of the tax, this is the financial nerve center, ensuring the project's sustainability and forward momentum.

Auto-LP Injection: Benefiting from 1%, this mechanism fortifies the liquidity, enhancing the overall stability of Z³ in the market.

Marketing & Development: The remaining 1% is channeled towards aggressive marketing strategies and relentless technological advancements.

The Z³ token isn't merely a cryptocurrency – it's an emblem of the project's ambitions. With ongoing developments to weave the token deeper into the Zev³ ecosystem, the Z³ token is like an all-access pass to the utilities to come. This strategy is intended to create a sense of unique value for Z³ holders, inviting them to be part of the journey as new developments are released.

While Z³'s immediate vision is manifested through a low-tax structure, the long-term goal paints a bold picture: a zero-tax token. This audacious move is on the horizon, awaiting the point when the Zev platform's revenue hits self-sustaining benchmarks. It's not a mere promise – it's a commitment, guided by meticulous planning and strategic execution.

ROADMAP

Since its inception, Z³ has not only set ambitious milestones but has consistently surpassed them. Every utility rollout stands as a testament to Z³'s commitment to excellence. As we look to the future, our blueprint is clear: exceed investor expectations, innovate relentlessly, and expedite product deliveries.

2023 AT A GLANCE

The first quarter of 2023 saw Z³ stealthily step onto the scene, swiftly followed by the release of our foundational whitepaper. Our commitment to transparency and security was demonstrated early on, with an extensive audit and the initiation of KYC procedures in collaboration with SolidProof. Wrapping up Q1, we unveiled ZEV³, hinting at the innovation to come.

By the second quarter, momentum was in full swing. ZEV³ underwent a thorough audit, setting the stage for its much-anticipated launch in April. A refined version of our whitepaper was shared with the community, reflecting our iterative approach to project development. Additionally, our endeavors in fostering collaborative growth were cemented with the introduction of the Partnered Service Provider Dashboard.

Entering the third quarter, our focus broadened to enhancing project support, leading to the birth of Z³rvice^s. We also gave a sneak peek into the future, sharing information about the development of Project Profiles for projects that launch through the ZEV³ platform. Finally, the Tesseract³ launch underlined our dedication to providing liquidity support, showcasing our holistic approach to project development and ecosystem enhancement.

THE FUTURE OF Z³

Q4 2023

- Zev V² testnet
- Zev V² launch
- Zev EVM Expansion
- Token Manager Dashboard
- New Utility Reveal
- Operation X Integration

Q1 2024

- Operation X Implemented
- Operation X Launch

CONCLUSION

In a digital realm fraught with complexities, Z³ emerged with a clear vision: making cryptocurrency effortlessly accessible to everyone. We believe in dismantling the prevailing barriers and continuously pushing the envelope. Our commitment doesn't merely lie in enhancing existing solutions but also in pioneering transformative products where there's a void.

ZE^V³, alongside its suite of programs and utilities, isn't just about changing the project launch process – it's about reimagining it. It's about presenting every stakeholder, irrespective of their experience, with compelling reasons to embrace this revolutionary platform. With Z³'s introduction of an unprecedented all-encompassing suite, we're not just carving a niche – we're setting the gold standard.

Envision the daily arsenal of tools that investors depend on – from token research and contract checks to risk assessment and project buy-ins. Now, picture all of these tools, refined to perfection, encapsulated, and enriched under the Z³ banner.

But this is not our destination; it's our starting point. As we steer into the future, our aspirations soar higher, our ambitions grow larger, and our commitment to the DeFi community becomes even more profound.

The future of DeFi has a name, and it is Z³.
